YOUR LIFE**

Why Self-Watering Mechanism Needed !!

- Watering plants daily is a big task and time consuming.
- Water along with soil spill over the surface and make it dirty. Accordingly plants are mainly placed at balcony and benefits of plants are not utilized fully
- 80% of plant dies because of under watering/excess watering

Features of Self-Watering Mechanism

- With dual compartment and water level indicator, water is stored and replenishment is required once in a week/two week
- Soil is not mixed with water and is not drained out keeping the nutrient value of soil intact for longer period of time
- With air tight compartment there is no room for dengue mosquito breeding in/around planter
- Plants take water by its root as and when required leaving no chance of under watering/excess watering to take place.
- Sturdy root systems is developed which produce larger stems and branches above for even more foliage, flowers and fruit, depending on the plant type.
- With our unique self watering vertical system which is motor based creates a soothing sound of water fall.

ENGINEERING GREEN-WALL

The Plant Green Wall, in general, is to greenery and beautify the various plants or high vine in the building and inside and outside of the building room, to create a local natural ecological atmosphere to achieve the purpose of landscaping and preservation of ecology as a modern landscaped application technology. The plant wall is called “Eco Green Wall” using the most fetching wall design and application technology, using smart automatic irrigation systems, no need to manage, plant survival long, and can be handled by various art patterns based on customer demand.

HYDROFALLS

"Hydrofalls" is a self-watering system to nourish plants. It can be formed into a green wall through simple installation. The unique design of Hydrofalls lets customers freely choose to build a mini green wall or large scale green wall. It can create a natural ecological environment. The mini green wall is quite suitable for a balcony, small size apartment or an office. Larger scale greenwalls are more suited for a bigger living area, larger offices or shopping malls.
